Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from naxed seekes of larvae. The BAC library was constructed at Texas AAM University BAC Center University, College Station, Texas 77843-2123, USA using a HindIII partition and Misseless of the Station of DNA is a feature of the BAC Center University, College Station, Texas 77843-2123, USA using a HindIII

                                                                                                            Site_2: XDOI; supplier: Boyce Thompson Institute; sequencing: The Institute for Genomic Research. Fruit were harvested at the breaker stage (first sign of lycopene accumulation on the blossom end of fruit). Fruit were cut in half and the seeds and locules were discarded prior to freezing the pericarp."

/dev_stage="4-week-old seedlings infected with
Collectorichum graminicola"
/dote="vyector: pBluescript II SK(-) from Lambda Zap II;
Site_1: XhoI; Site_2: EcoRI; Four-week-old sorghum
seedlings were sprayed with spore suspension prepared from
3-week-old FRMAI, a sorghum isolate of the anthracnose
pathogen Colletorichum graminicola. Incculated plants
were kept in a 25 cark growth chamber with 100% relative
humidity for 24 hr. followed by 12/12 hr of light/dark
cycle at 25 c with 90% relative humidity for another 24
hr. All leaves were harvested and quick frozen with liquid
nitrogen and stored in a -80 C freezer. The library was
made from poly-A RNA in the cloning vector lambda ZAP II.
Clones to be sequenced were prepared by mass excision.
WARNING: While most or all ESTS are expected to derive
from the host plant, no effort was made to eliminate ESTS
deriving from the pathogen."

/cloe_lil="Entamoeba histolytica Sheared DNA"
/note="Vector: pHGS1; Site_1: Bst I; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of B. histolytica using a method described by Clark and Diamond (Clark, using a method described by Clark and Diamond (Clark, and Diamond Clark)
                                                                                                                                                                                                                                                                   G.G., and Dismond, L.S. (1993) Entanceba histolytics: method for isolate identification. Exp. Parasitol.

7.450.). The DNA was mechanically sheared to give a tight size distribution (-2 kb). The v + 1 method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Maring small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing. A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       992 TAGATGATTTTTAGAACAACTTGATCAGGTGAAAAATCTAGGACCACTGGATGATATTA 1051
